Fire-Rated Aluminum Window And Door Systems

Fire-rated doors and windows are a necessity in nearly every commercial building project. Their utility has historically forced architects and designers to compromise aesthetics to satisfy regulations.

Aluflam ensures beauty in spite of safety limitations.

Aluflam's system is **true extruded aluminum**, not aluminum clad steel. Our patented technology combines insulated aluminum framing with **clear, fire-rated glass**, which has been **tested up to 2 hours**.

Our products are available in all architectural finishes making them almost **indistinguishable from non-fire-rated doors and windows.**

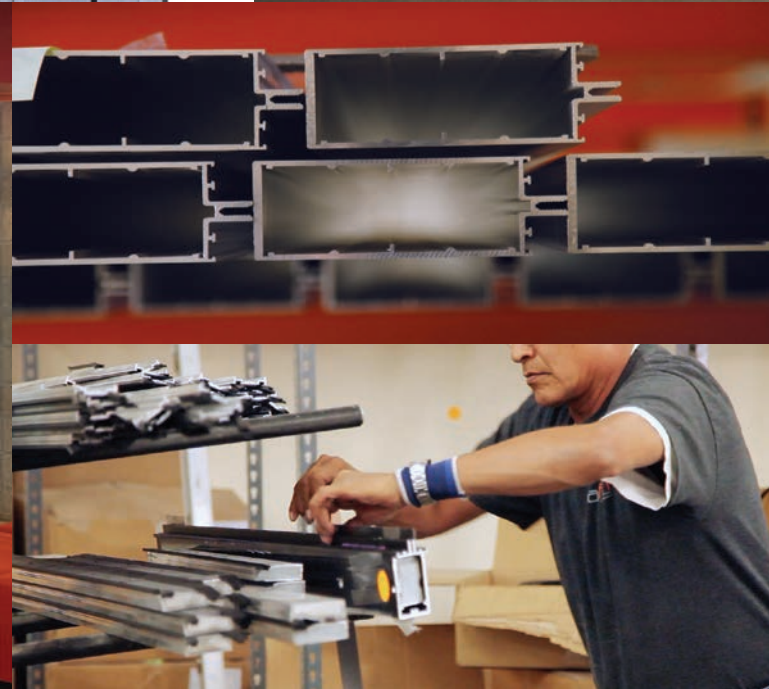

We **fabricate the framing in California** through a streamlined system, ensuring efficiency and accuracy from the initial estimate to the final delivery.

Top-of-the-line equipment and CNC machines assure precision and repeatability.

Each frame is customized and built-to-order.

Our flexible product and economical process make us uniquely qualified for custom jobs, specialized solutions and more complex glazing installations.

Completed frames and glazing are delivered prepared for installation with minimum labor requirements.

For all of these reasons,
we believe **Aluflam's fire-rated
doors and windows truly are
a barrier to fire... not design.**

Aluflam North America is located in Cerritos, CA and is a member of the Aluflam Group of companies with experience dating back to 1943 and includes operations in Denmark, Lithuania, Poland and the United States. The North American operations were launched in 2003 with extensive product development and fire testing.

We aggressively invest in the future, ensuring constant improvement of our process and equipment. This commitment to service, agility and accuracy makes Aluflam the leading choice for fire-rated glazing, from basic to the more complex.
