# Airolite — We're An

## Workmanship

The American work ethic thrives at our Schofield, WI, manufacturing headquarters. Here, pride in workmanship is more than a valued tradition; it is a tangible factor in delivering products that perform as designed, on schedule and within budget. Product quality and operational excellence have made Airolite a model in our industry.

### Communication-Based Manufacturing

There is no production line mentality at Airolite. On our shop floor, welders, cutters, shapers and assemblers understand the interrelation of their tasks and skills, and they collaborate to ensure that the end product reflects their shared ownership of its creation.

### Empowered Employees

Any employee in our plant can call for a “pit stop” to address an issue related to process, product quality, productivity or other concern. Constant awareness, equal involvement and responsibility ensure extraordinary levels of efficiency, quality and customer service.

### Expert Builders

At Airolite, workmanship means more than physical and technical skills; it even means more than “best built.” In our industry, true workmanship entails an intrinsic knowledge of product function, performance requirements and integration at the project site.

### Ensured Performance

Airolite product performance is proven in our own state-of-the-art test facilities and independently certified by AMCA. Robust evaluation protocols verify performance related to air pressure, wind-driven rain, hurricane-level impact resistance and other parameters to ensure aesthetic and functional performance for the building's full lifecycle.

# American Brand

## Partnership

Airolite sustains its position in the industry through a focus on effective working relationships where close collaboration results in better products and better projects. These partnerships include customers, representatives, vendors and employees.

## Collaboration

At Airolite headquarters, hardly a day goes by without engineers and plant employees meeting to discuss particular products and processes. This direct design-manufacture link is vital in solving challenges, creating innovations and saving time and money.

## Forging Strong Links

Open interaction between our authorized representatives, project managers, design/manufacture team, contractors and end users results in uncommon responsiveness and agility to keep project schedules on track, and finding timely solutions to challenges in planning, production or on site.

## Leveraging Synergy

Airolite maintains exceptional relationships with nearby extruders, finishers and mechanical manufacturers. These strong ties support a virtually seamless process that brings products to projects on schedule and as designed.

## Your Home Team

Unlike other manufacturers, U.S.-based Airolite design assistance personnel, sales representatives and customer support staff provide responsive service on a timely basis for customers across the country. Our doors stand open, and no passport is needed to visit — regularly, we play host to colleagues and customers at our headquarters in Schofield, WI, offering valuable educational opportunities and an avenue to exchange input, insight, questions and answers.

## Focus on Priorities

Mistakes can happen — improper specs, shipping damage, production error — but, as a trusted partner, Airolite's first priority is to do what's needed to keep the project on track. Then, instead of fixing blame, we work to fix the problem. This commitment to the needs of the customer and project has cemented many long-term relationships.

# Leadership

Since 1919, the Aiolite name has been associated with prestigious building projects across the U.S. Today, many American architects often specify Aiolite louvers, sun controls and grilles because they value the high quality craftsmanship, product knowledge and customer service that helped us establish such prominence on the American architectural landscape.

## Industry Leaders

Aiolite has maintained long-standing affiliations and occupies leadership roles with organizations that set industry standards for product quality and best practices, including AMCA, AIA, ASHRAE and others. As such, we stand at the forefront in the development of new industry guidelines and solutions.

## The Company We Keep

Aiolite operates within a world-leading network of providers serving the construction industry. With shared technologies, resources, relationships and expertise, we are able to address virtually any architectural project need.

## Unequaled Ability

In terms of manufacturing capabilities, no competitor can match our flexibility and agility to adjust to customers' special needs, our organizational excellence that ensures quick turnaround, or our proprietary machine capabilities.

## Leading by Example

Leadership is more than a position; it's a mindset. Our commitment to customer service, new processes to improve product quality and highest level of manufacturing efficiency consistently redefine what value means in our industry.

## The Company that works, delivering the look that works.

For architects, builders and building owners across the U.S., Airolite provides innovative, effective product solutions that make a unique visual statement while performing critical building functions. We call it, "The look that works."

Our products ventilate, illuminate, reduce glare, prevent water penetration, save energy, provide visual screens and add security to new and renovated buildings — while making a stunning first impression. Our company is an innovative leader in architectural louvers, high-performance grilles, screens and sun controls. All Airolite products are assembled in America to your unique design, whether based on existing product platforms or new product development.
