Accenture in Salesforce Tower

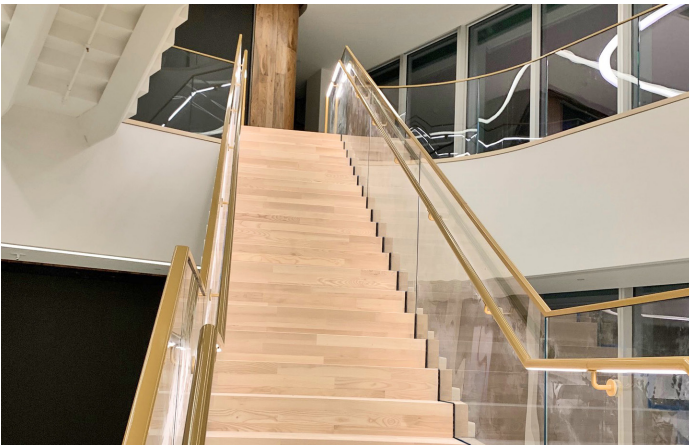

Office Space

Photography: Mission Glass

Project Information

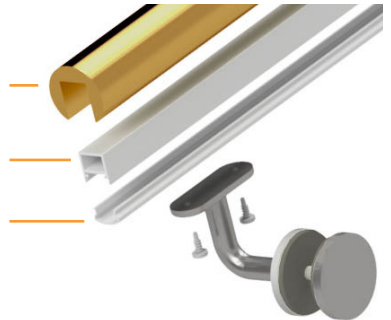

Location: San Francisco, CA
Architect: Gensler - San Francisco
GC: BCCI Construction Company
Glazier: Mission Glass
Scope: Consulting giant Accenture opened its new flagship hub in San Francisco's tallest building - Salesforce Tower. At the center of the 31st - 35th floor renovation is a stunning five-story staircase featuring sawtooth cut glass railing to match the rise of each stair, and shoe mounted glass railing on accompanying overlooks. Aluminum handrails and top cap complement the building's contemporary aesthetic, while also providing added safety and ambiance via integrated LED lighting with an additional diffuser positioned on the underside of the handrail to achieve the desired look.

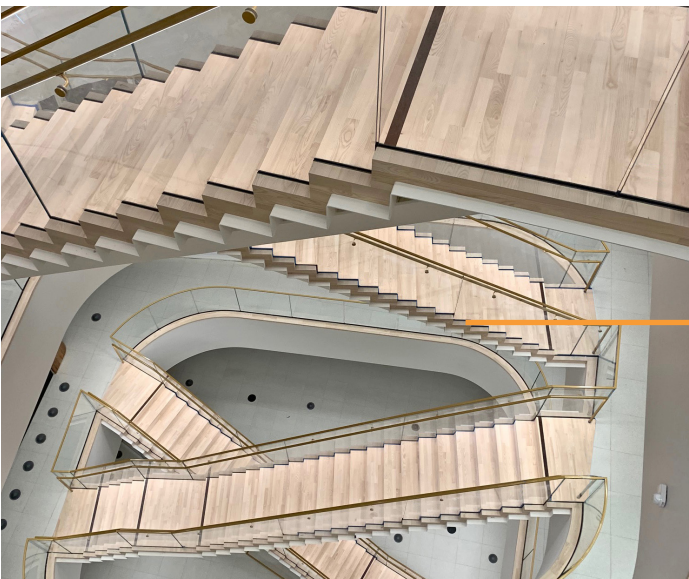

Gold powder-coated handrail
with notch to fit over channel

Aluminum channel houses
strip style LED lighting

Acrylic diffuser

Aluminum, powder-coated handrails with an aluminum channel inset house the strip style LED lighting and conceal wiring. An additional acrylic diffuser was positioned on the underside of the handrail to achieve the desired look of continuous lighting.

Sawtooth cut 13/16" low iron tempered laminated glass was grouted into a custom steel channel running along the multi-level stair stringer to match the stair rise and run.
